	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Command-line input to pick the QB. ● Load this season's play-by-play data and filter to the selected QB's pass attempts. ● Sort each throw into the zones (deep middle, short left, etc…). ● Calculate average CPOE for each zone. ● Display the heatmap.	**Schedule - (For V2.0+)** ● Simple GUI in Java that allows selection of QB's. ● Comparison of two QB's ● Feature that allows the user to select which season they want.
Not Important	**Delegate - (Use a library)** ● Getting the play by play data and CPOE (Use a known data source). ● Visualizing the heat map (use seaborn or matplotlib instead). ● Filtering the data (Use pandas).	**Delete - (Cut it)** ● Building a website to display the results. ● Building my own CPOE model. ● Live updates during games.
